FRÖVI

a new era of responsible production

A man and a woman are seated at a light-colored wooden table in a modern office environment. The man, on the left, is wearing a white shirt and glasses, looking down at a magazine or book. The woman, on the right, is wearing a dark blue long-sleeved shirt and is typing on a laptop. The table has a few papers and a pen on it. In the background, there is a dark wooden wall with a grid of metal shelves. Some shelves have potted plants, including a green leafy plant in a white pot and a fern in a white pot. The overall atmosphere is professional and eco-friendly.

**“Environmentally conscious
design that offers strength,
sustainability, versatility,
and a green alternative”**

A woman with blonde hair, wearing a white polka-dot shirt and black pants, is sitting on a wooden chair and reading a book. She is in a modern interior space with a dark, textured wall, a warm lamp, and several potted plants. In the background, there are wooden shelves and a staircase. A large green plant is in the foreground on the right.

FRÖVI

We're welcoming a new era of responsible production at Frovi, and it all starts with our Bamboo collection.

Crafted using sustainable materials, including pressed bamboo, connectors made from 100% recycled nylon (PA6) and the felt we use is a blend of 70% recycled and 30% virgin PET, which is most commonly used in the manufacture of plastic bottles.

environmentally conscious

Our Bamboo range has been designed with our planet in mind, so you don't need to choose between a more sustainable future or surrounding yourself with stylish products, you can have both. We have designed the range to utilise 'common components' to maximise efficiency in production, meaning less energy and overall waste.

100% recyclable packaging

Our packaging is made from 100% recyclable cardboard, made from 80% recycled material and secured with recycled brown paper tape.

felt panels made from plastic bottles

Our felt panels are made from a blend of 70% recycled and 30% virgin PET, which is mostly used in the manufacture of plastic bottles.

sustainable buildings

The use of bamboo products can help achieve a higher certification level for LEED and BREEAM. It can also help achieve more points towards the building becoming WELL-aligned.

100% recycled nylon (PA6) connectors

low energy powder coating

Our specially designed powder coatings are cured at lower oven temperatures, which reduces energy usage and waste generation, lowering our overall carbon footprint.

Our Bamboo range has been created by our environmentally conscious in-house design team, where possible we have opted to use the most eco-friendly and low impact materials.

This year, we've taken further steps towards a more sustainable future. It starts with the launch of our Bamboo collection, a range that uses environmentally conscious materials and processes.

All our shelves, cupboards, storage boxes and tabletops in the range are made from bamboo. This material is widely known for being extremely sustainable hard wood alternative - it has a negative carbon footprint!

anti-bacterial

Bamboo has the ability to withstand and kill bacteria. It is also very easy to clean.

**1/3 of the water
consumption
than oak**

clean air

Bamboo releases 30% more oxygen than hardwoods and it absorbs 5 times more carbon dioxide than standard trees.

one of the fastest growing plants

It only takes a year to grow back after it's been harvested. Some species grow more than 3 feet (1 metre) each day.

**no pesticides
or chemical
fertilisers**

zoning

Dividing a space with a corner unit that can be used from both sides

Bamboo is a plant that offers limitless potential for the future environment. The Bamboo range has been designed to utilise common components to maximise efficiency in production, meaning less waste

**Created to be quick
and easy to assemble**

**Inspiration taken from
the post-war Festival of
Britain furniture**

store

Use a run of cupboards to create extra storage space with flexible height shelving above.

accessorise

By adding accessories, you can turn your Bamboo system into whatever you want it to be.
